

PENGUINS

My picture of a penguin:

What do they eat and drink?

Penguins eat seafood and they drink salt water.

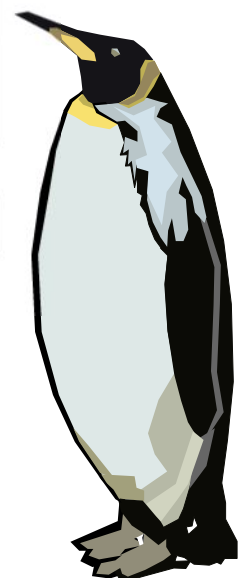

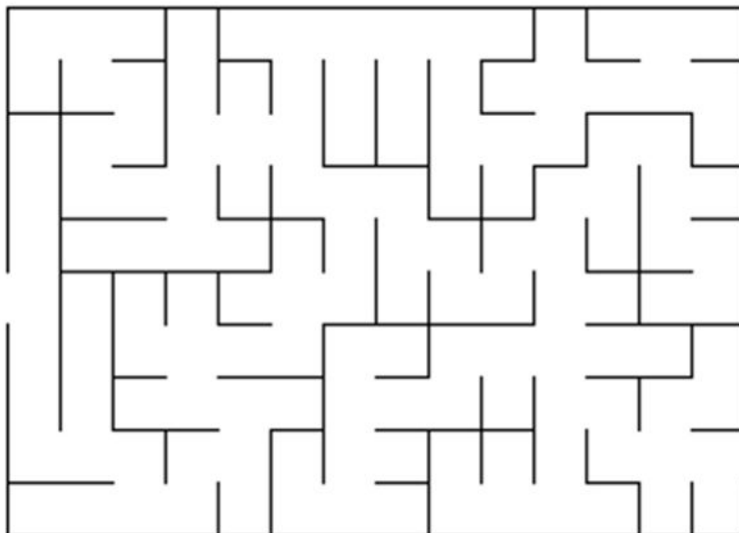

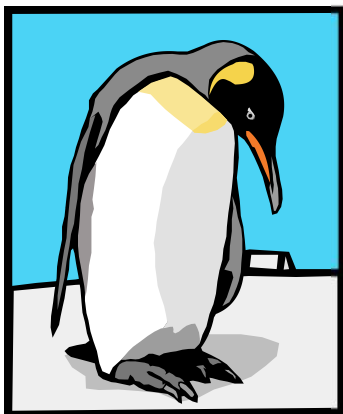

Some facts:

Penguins are birds. They can't fly, their wings are just for swimming.

They spend much time underwater, searching for food in the ocean.

Penguins cannot breath underwater - they are able to hold their breath for a long time.

Where do they live?

They live at the South Pole on Antarctica, some are found on the coasts of South America, Africa, New Zealand, Australia.
